

1 MOTOR CONTROL SYSTEM FOR ENDODONTIC HANDPIECE

2

3 ABSTRACT OF THE DISCLOSURE

4 A system for establishing a cumulative history of stress
5 factors encountered during use of an endodontic file and keeping
6 track of such for a plurality of files so that the files can be re-
7 used with confidence that a given file is as safe to use as a new
8 file. Cost of file maintenance is significantly reduced and the
9 likelihood of file breakage in use is minimized.
